SUBMITTED TO:

Engr. Muhammad Imtiaz

Department:

[Department of Computer Engineering]

Project Overview:

An Education and LMS template designed specifically for the university, College, School, LMS course, Training center or any kind of educational institution. It is built by using HTML5, CSS3 and jQuery.

University website deals with the maintenance of University data, records, instructions, and student information within the University. UW is an automation system, which is used to store the information about university. It contains information about upcoming events of university and about faculty members. It shows related information of all the departments of an organization and overall achievements of the university. You can enroll in any course through this website. Development process of the system starts with System analysis. System analysis involves creating a formal model of the problem to be solved by understanding requirements.

UNIVERSITY WEBSITE is a flagship product of Easy Solution which covers all aspects of Universities, Colleges or Schools. UW covers every minute aspects of a universities work flow and integrates all processes with user friendly interface having:
